

Spanish Leather Craftsmanship

HANDMADE IN SPAIN

Piel Frama is a company from Spain dedicated to the manufacturing of leather cases for mobile devices.

Piel Frama has been making leather goods since 1945 and they transferred all that experience to the design and production of mobile device cases when the devices made an appearance on the market.

These cases are completely handmade by skilful craftsmen with the highest quality leathers and fit like a glove to the models for which they are made.

Piel Frama is constantly changing and adapting the design of their cases according to new characteristics for models of handsets for manufacturers including Apple, HP, HTC, Blackberry and others; available in several colours and kinds of leathers.

“When you own an electronic device, always try to offer it the best protection.” Find them at: www.pielframa.com

Time to Get Your Own Website

IT'S EASIER, FASTER, AND CHEAPER THAN YOU THINK

Don't make tough times tougher by relying solely on foot traffic for business. It's time to capture web traffic with an online presence.

WDM introduced BaZoing! from Skyhound at our EXPO last October and have not been surprised by their popularity among wireless dealers. Getting a website up and running within minutes (not weeks) is what most retailers find amazing. In fact that “wow” factor is why it's called BaZoing! in the first place.

BaZoing! can deliver your store's own, instant website with automatically loaded handsets and rate plan information, opt-in email lists, store information, and carrier news for \$50 a month.

Take a test drive with their 5-day free trial and be impressed with a new website within 10 minutes that contains a depth of information that rivals carriers' websites.

Don't worry, you won't have to be a tech wizard to use it! Your website will text you the minute a customer says they are ready to buy. BaZoing is also working on bringing accessories to all their websites as well. Try it out by visiting www.bazoing.com or call (800) 927-3074.

Wilson Gives iPhone the Boost

WILSON ELECTRONICS
IBOOSTER

Unique to the Wireless Market, the Wilson Electronics' plug-and-play iBooster™ kit helps users reduce dropped calls, increase data rates in weak signal areas and originate calls from those dreaded “dead spots”. The iBooster and its external vehicular antenna increases any iPhone's™ output power to the cell site while also improving its ability to hear signals it normally cannot, keeping the user more reliably connected. Designed for simple set up, the iBooster can be easily moved from vehicle to vehicle.

Built into the iBooster cradle is a Wilson Electronics' bi-directional Smart Technology™ signal amplifier and battery charger. The phone-specific ‘slip in’ cradle features a pass thru connector for external accessory access while the iPhone is in the cradle. The cradle is ideal for hands free operation in conjunction with a user's headset or Bluetooth device. Blackberry® Curve and universal versions are also available.

Now maybe iPhone users can stop complaining about their cell coverage
